

Keep your aviation manuals accurate, current, and audit-ready.

SmartDocs is built specifically for authoring, reviewing, approving, and distributing aviation manuals, combining Word-style editing on top of strict aviation structure with AI that is grounded in your manuals and your regulations.

What It Does For Your Team

01

Create compliant manuals faster

SmartDocs' aviation-specific authoring workflows and AI content creation reduce the time and effort needed to author and update manuals. Teams do more in the same time, and authoring capacity scales with your business.

02

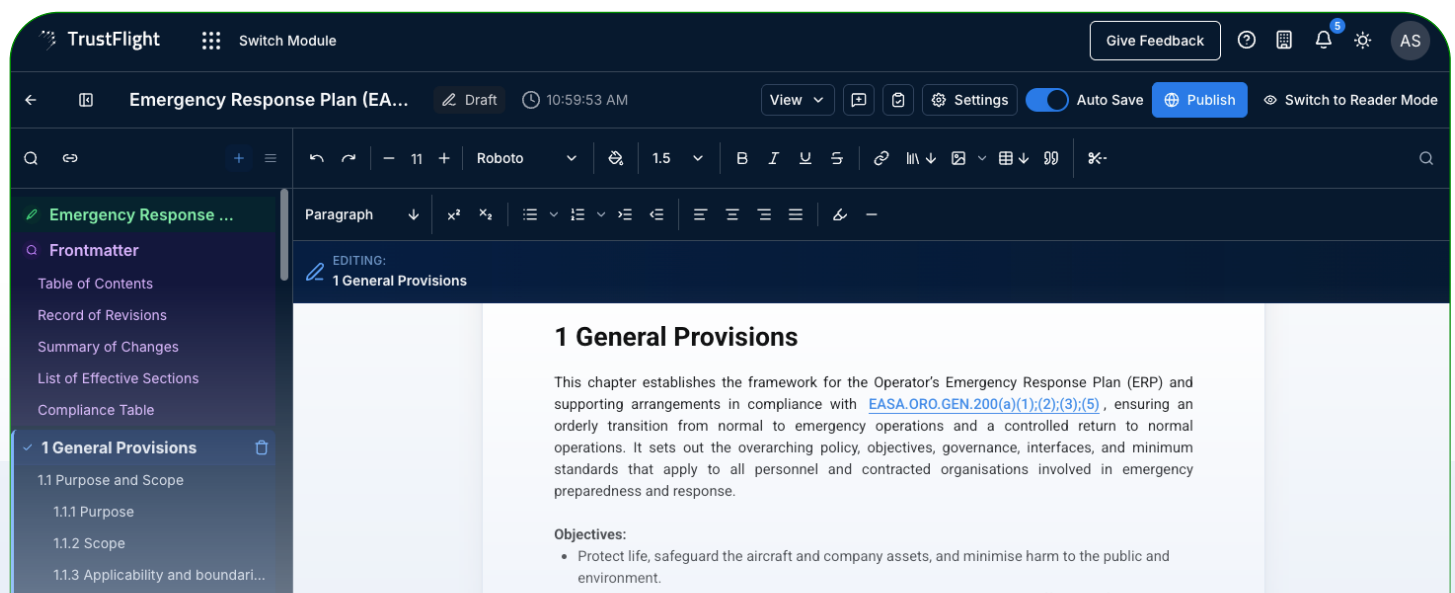

Detect gaps before publication

Reference linking between manuals, and to regulations gives a clear picture of document dependencies. Review and approval workflows, plus AI grounded in your regulations, prevent errors from being introduced.

03

Get more people contributing

A Word-style interface and intelligent content assist lets more team members confidently participate in creating and maintaining manuals. Subject-matter experts can collaborate on a single digital document, increasing accuracy and speed.

Why SmartDocs

Word-style Editing, Under Aviation Structure

Authors who know Word are productive on day one. Strict heading levels and enforced chapter structure mean compliant output without specialist training.

AI Grounded in Your Regulations

The AI Document Assistant draws on your manuals and your regulation library. Every suggestion is reviewed before it is incorporated.

Compliance Artifacts, Generated For You

Tables of Contents, Lists of Effective Sections, Records of Revision, and Summaries of Change, generated automatically.

Unlimited Authors & Readers

Pay based on the size of your business, not your team. AI is included. No per-user metering, no per-author or per-reader fees.

Inside SmartDocs

Authoring & AI

- Word-style editor with enforced aviation structure
- AI Document Assistant, grounded in your manuals and regulations
- AI Templates and Importer: generate templates from regs, convert existing manuals from PDF

Compliance & Traceability

- Reference links to regulations, with link integrity monitoring
- Lists of Effective Sections, Records of Revision, Summaries of Change generated for you
- Configurable multi-step review and approval workflow

Collaboration & Distribution

- Text-anchored change requests, tracked through publication
- Granular version comparison
- Read and Acknowledge with reader tracking; iPad reader with offline support

Implementation & Support

Standard Implementation

Flat fee.

Tenant provisioning, SSO/MFA, configuration, train-the-trainer.

Manual Revision Service

Optional.

Our aviation technical authors write or maintain manuals for you.

Data Privacy & AI Security

Your data is yours, and is never used to train AI models. Data is encrypted, isolated, and protected with enterprise-grade security.

Already on Centrik?

SmartDocs publishes natively into the Centrik Documents module for distribution, EFB, and read-and-sign.

No user or document migration, no new EFB approval.
